## Summary

I'm a Full Stack Developer who understands the problem before touching code, planning architecture and component interactions upfront to prevent chaos later. I work comfortably across the stack, bring fresh perspective to problem-solving, and write maintainable code others can work with. I thrive in fast-paced startup environments where quality matters. I'm early in my career, which means I ask questions that uncover edge cases, learn quickly from feedback, and genuinely enjoy figuring out how systems connect. I'm looking for a team that values thoughtful collaboration and mentorship, where I can grow from someone finding their footing to someone others depend on.

## Technical Skills

### Languages & Frameworks:

JavaScript • TypeScript • Python • React • Angular • Node.js • Express.js

### Database:

MongoDB • MySQL • Database Schema Design

### Frontend:

HTML5 • CSS3 • Tailwind CSS • Bootstrap • Responsive UI Design

### Tools & DevOps:

Git/GitHub (Version Control) • Postman • Vercel • Netlify

### Backend & APIs:

RESTful APIs • CRUD Operations • JWT Authentication

### Communication:

English • Tamil • Hindi • Urdu

## Experience

09/2025 – Present  
Chennai

### Full Stack Developer Trainee, Neolysi Technologies

Fresh out of my MCA, I'm working on multiple real production systems with a team, learning how professional development actually works beyond academics. I'm contributing to complex full-stack applications, participating in code reviews, understanding sprint workflows, and discovering how to write code that scales. Every day teaches me something new about collaborating with developers, handling feedback constructively, and building software that real users depend on.

01/2025 – 03/2025  
Chennai

### Full Stack Developer Intern, Vcodez

Collaborated with a development team on a restaurant supply chain project, contributing to both frontend and backend development. Worked alongside experienced developers who taught me how to structure code properly, debug efficiently, and think about user needs beyond just technical requirements. This experience showed me what team-based software development looks like in practice.

## Projects

### EventHub, Angular • TypeScript • MySQL • JWT

Multi-venue booking platform with 20+ interconnected modules handling real-time availability, custom bookings, payment integration, and role-based dashboards and role-specific workflows for customers, venue owners, and administrators. Built with reusable Angular components for maintainability and scalability.

### SupplyFlow, Django • React • Node.js • MongoDB

Restaurant supply chain management system tracking orders from kitchen to delivery with real-time inventory management. Coordinates multiple suppliers, provides end-to-end visibility, and handles critical timing where delays directly impact business operations. Transforms complex business workflows into intuitive interfaces.

### Learning Projects, Personal projects built to strengthen full-stack fundamentals:

- CodeMentor AI - AI-powered code reviewer using Gemini 2.0 API providing real-time feedback for beginners (React • Node.js)
- WorkflowHub - Employee management system exploring JWT authentication and role-based access patterns (MERN Stack)
- SkillForge - Vanilla JavaScript portfolio builder focusing on DOM manipulation without framework dependencies (HTML • CSS • JS)

## Education

2023 – 2025  
Chennai

### Master of Computer Applications (MCA), Measi Institute Of Information Technology

CGPA : 9.03/10

2020 – 2023  
Vaniyambadi

### Bachelor of Computer Applications (BCA), Islamiah College

CGPA : 8.55/10

## Certificates

### MERN Full Stack Certificate

College Placement Training

### MySQL

TheNewBoston

### MongoDB Developer's Toolkit

GeeksforGeeks

### Wells Fargo

Magic Bus Youth Skilling Program (Best Performance Award for Active Participation)

### Python Programming

YBI Foundation

### JavaScript Fundamentals
